Workshop: HOW TO BUILD A MOBILE SOUNDSYSTEM

SAMSTAG 11.11.2017 21:30-23:00

Abstract Julian Dorner / Petrosilius

Either for a proper squat rave or for a demonstration - to empower people to reclaim space in the city, they need the right tools to do it.

To achieve this, Petrosilius from Oscillating.Space wants to share his recent experiences in building a loud and cheap mobile sound system. First, he will give you an overview of all the important parts of a soundsystem and shows you whats important for getting enough sustainable energy to power the amplifiers for a full night. He will also show you how to choose the right speakers to create a club like sound.

After this theoretical part, he will also build a small soundsystem with all the participants to show you how easy it actually is to build a mobile soundsystem.
